I upgraded the OS in my computer from Vista Home Premium to Windows 10, and now I want to install it again. I have an error message while I try to install it again and I cannot find the solution or an alternative... that package installer is not working for some reason... when I try to install it through the command line I get this error message... :error: data mismatch. I am unable to find this on Google because there are so many results for people having problems with Windows 7. So I hope you'll be able to help me... I've just formatted my hard drive and reinstalled my operating system from scratch but now I cannot install software on my computer. I've tried it with my both USB and optical drives and neither will work. Is there something I need to do? I've tried searching but have only found results for people with similar problems and not with my issue...error: data mismatch. I am unable to find this on Google because there are so many results for people having problems with Windows 7. So I hope

System Requirements:
