A .Q: Does C++ 11 support the use of  
std::unique\_ptr as a smart pointer that owns a stack  
allocated object Does C++ 11 support the use of  
std::unique\_ptr as a smart pointer that owns a stack  
allocated object? I am trying to use a stack allocated  
object with an unique\_ptr, but the implementation of  
unique\_ptr does not match the function prototype of  
the method taking a smart pointer to a stack object  
as a parameter. Am I using the right C++11 library?  
I am using MSVC. I am not interested in dealing with  
specific implementations, I would like to know if it is  
possible to use std::unique

wise approach for the preliminary evaluation of patients with anaphylactic shock after severe burn, and develop a simple and evidence-based notation to present these findings. Retrospective analysis. Level I burn center. We present the evolution of three patients (two with acute adrenal insufficiency and one with anaphylactic shock) after a thermal injury. The data obtained at each step of the diagnostic process in each patient are presented in the form of tables. All patients presented decreased serum calcium and/or potassium. In two of them anemia of chronic inflammation was present, and lymphopenia was found in one of them. The absence of a correct notation for the diagnosis of anaphylactic shock after a thermal injury may explain the difficulty in establishing a definitive diagnosis, even when laboratory data are generally within normal range. A standard notation is presented, which details the haemodynamic and laboratory data necessary for the diagnosis of acute adrenal insufficiency and anaphylactic shock.

Running in the high winds of Hurricane Sandy, the storms left a trail of damage that extended from the East Coast of the U.S. to the Great Lakes. The result: widespread power outages and blackouts and more than 2 million people without electricity. The storm claimed eight lives, but forecasts predicted something worse could happen. So, as Sandy
